

Press release

Air tightness explained at Interbuild

1st August 2008

Chiltern Dynamics' Energy Services Department is again exhibiting at Interbuild, at the NEC in Birmingham from 26th – 30th October. Services include air tightness testing, thermographic inspection of buildings and thermal analysis of building products. Part L of the England & Wales Building Regulations requires new dwellings, new buildings other than dwellings and 'large' extensions to non-dwellings to undergo on-site pressure testing to prove air tightness performance.

Chiltern Dynamics has been at the forefront of educating housebuilders and developers on the demands of the test and how to pass – request a copy of two free Technical Information Sheets, TI-0808 – *Air Tightness Testing*, covering the regulatory requirements, and TI-0809 *Achieving Air Tightness in Buildings*.

The company will repeat its '*Air tightness Testing Explained*' one-day training course in High Wycombe on 18th September and 13th November. Cost is £125 + VAT for TRADA members and £145 + VAT for non-members. Group discounts are offered. For more information telephone 01494 569800 or email airtight@chilterndynamics.co.uk.
