Ground floor Area (m ²)	
Wall Area (m ²)	
Ceiling Area (m ²) Top floor/boundary between the conditioned and unconditioned space	

Signature	
Date	

Area sizes should be available from the project architect. We will calculate the envelope area for the building based on the figures you have provided. The envelope area dictates the number/type of fans we will need to complete the test which impacts on the quote. We will calculate/verify area sizes when the job is contracted. Therefore large inaccuracies (greater than 20%) in the areas stated may affect the final contracted value.
